

## HOUSTON DOWNTOWN PARK HOUSTON, TEXAS

### QUICK FACTS:

- 4500 cubic yards
- Supplier: Therma Foam, Inc.
- Contractor: Miner-Dederick
- Architect: Hargreaves Associates
- Engineer: Ulrich Engineers, Inc.

The construction of Houston’s downtown municipal park selected Foam-Control EPS Geofoam with Perform Guard® as the engineered fill installed over a parking garage. The lightweight solution was selected to minimize the load on the garage roof deck. In addition, the Foam-Control EPS Geofoam was contoured to add beauty to the design.

With the speed of construction, installation of EPS Geofoam saved money and time. The contractor was able to complete the installation with a crew of only 4.

EPS Geofoam with Perform Guard solved another problem at the Houston’s park site: potential termite damage to the Geofoam. EPS Geofoam with Perform Guard is treated with an EPA Registered additive that prevents the potential for significant infestation of the Geofoam.

# PROJECT PROFILE

## CONTROL, NOT COMPROMISE.

### Fill face-off: Choosing Foam-Control Geofoam over other fill materials.

- Extremely lightweight to reduce lateral or bearing loads
- Predictable engineered performance
- Various Types available to meet project specific strength requirements
- Can be installed in various weather conditions
- Foam-Control EPS with  available to provide protection against termites
