

WHOLE FOODS MARKET AUSTIN, TX

QUICK FACTS:

- 1,500 cubic yards of EPS Geofoam
- Contractor: Hensel Phelps
- Engineer: SWA Group
- Installer: Valley Crest Co.

Whole Foods Market® is the world's leading retailer of natural and organic foods and is also an active participant in the local communities. They recently finished a new 6-story corporate office with a grocery store located on the ground level. The building plans called for a new plaza to be built directly over the market and the structure could not support the additional weight of traditional fill materials. The designers were faced with finding a lightweight solution.

Foam-Control EPS Geofoam was selected to minimize the load on the roof structure of the market. In addition, the Foam-Control EPS Geofoam was contoured to provide the enhanced landscaping in such a manner to add beauty to the design, at the same time assisting with water management for the plaza.

PROJECT PROFILE

CONTROL, NOT COMPROMISE.

Fill face-off: Choosing Foam-Control Geofoam over other fill materials.

- Extremely lightweight to reduce lateral or bearing loads
- Predictable engineered performance
- Various Types available to meet project specific strength requirements
- Can be installed in various weather conditions
